

To run a GPS hunt on your own iPhone or Android phone you need to ensure LOCATION SERVICES are tuned on, on the device and on the browser you use...

If you have an iPhone....

1. Go to **Settings**
2. Go to **Privacy**
3. Click on **Location Services** (in the pic it shows it's turned on)
4. Step 4 shows where you can slide to **ON**
5. When turned on, a list will show below, allowing you to turn Location Services On or OFF for specific applications. Find the **BROWSER** you use in this list, i.e. safari, and turn that button **ON** too.

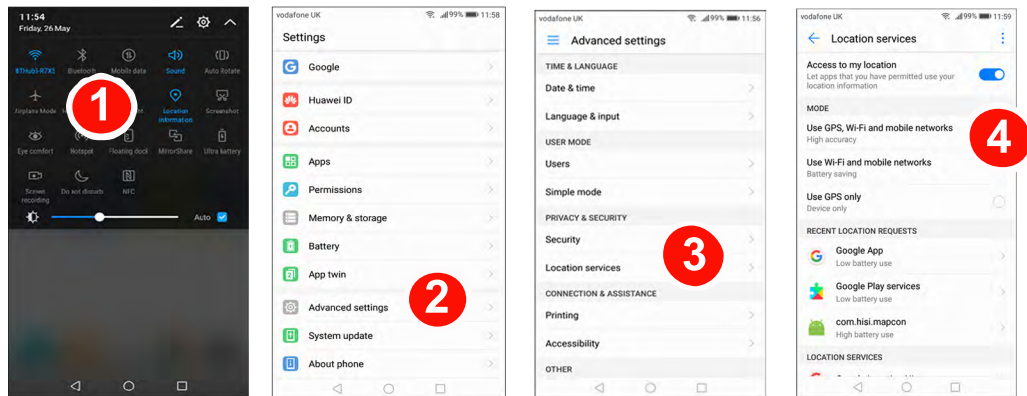

Depending on which iPhone you have, this process might be slightly different, you can check your mobile device is set up correctly by trying our sample hunt by following the below link. If you are having any difficulties do get in touch.
